AI and the gaps on the bright side of responsibility

Daniela Vacek

Institute of Philosophy
of the Slovak Academy of Sciences

I will present a view of gaps in praiseworthiness (known as AI achievement gaps). This view accepts that such gaps are a genuine concern but also shows that they can be filled. This activity of "filling a gap", however, requires stretching certain concepts (such as collective, vicarious, or proxy responsibility) beyond their standard boundaries. Doing so, this approach allows for ascribing responsibility for the good (or even neutral) outcomes of AI systems to human stakeholders.
